

Fraction War

Remove all the face cards and the jokers. The ace is the number 1.

Make sure the 40 cards are well shuffled.

Deal the whole deck to both players. Each player should have 20 cards in their “**playing pile**”.

Both players turn over their top two cards and put the smaller number on top of the larger number to create a proper fraction. The player with the larger fraction takes all 4 cards and wins the first “**battle**” of this **war**. The winner of that round puts all 4 cards into their own “**captured pile**”.

A	3
A	3
4	5
4	5
Player A	Player B

Player A :
 $\frac{1}{4}$

Player B:
 $\frac{3}{5}$

Player B Fraction is larger

Player B wins this battle

In the case of a tie (both fractions are equal) another two cards are turned over and the winner of that round takes all 8 cards and puts them into their capture pile.

This continues until all the cards have been played.

Both players count the number of cards in their capture pile. The player with the most cards in the capture pile wins the game (war).
